EXAMINER ZEE, EDWARD				
ART UNIT 2135		PAPER NUMBER		
NOTIFICATION DATE 04/30/2008		DELIVERY MODE ELECTRONIC		

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

ptomail1@bakerbotts.com
glenda.orrantia@bakerbotts.com

Office Action Summary

Application No.

10/826,987

Applicant(s)

GASSOWAY, PAUL A.

Examiner

EDWARD ZEE

Art Unit

2135

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 04 February 2008.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-34 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-34 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SI/02)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

1. This is in response to the amendments filed on February 4th, 2008. Claims 1-3, 9, 10 and 16-18 have been amended; Claims 27-34 have been added; Claims 1-34 are pending and have been considered below.

Claim Objections

2. Claims 9 and 28 is objected to because of the following informalities: the term "operable to" is indefinite and should be amended to read "configured to" or the like. Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 28 and 30 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
5. Claim 28 recites the limitation "the proxy machine" in line 4. There is insufficient antecedent basis for this limitation in the claim.
6. Claim 30 recites the limitation "the viral signature patterns" in line 1. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 101

7. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 9-15, 25, 28 and 31 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 9-15, 25, 28 and 31 disclose a system, which in light of the specification [page 6, lines 21-22], appear to encompass a software application. Thus, Claims 9-15, 25, 28 and 31 are drawn to software per se. Software is not a series of steps or acts and this is not a process. Software is not a physical article or object and as such is not a machine or manufacture. Software is not a combination of substances and therefore not a compilation of matter. Thus, software by itself does not fall within any of the four categories of invention. Therefore, Claims 9-15, 25, 28 and 31 are not statutory.

Claim Rejections - 35 USC § 102

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

9. **Claims 1-5, 9-11, 15-20, 24-32 and 34 are rejected under 35 U.S.C. 102(b) as being anticipated by Kindberg et al. (2003/0061515).**

Claim 1: Kindberg et al. discloses a method for maintaining computer security comprising:

- a. providing a signature file(*ie. a database containing capabilities, etc.*) containing information about known system vulnerabilities(*ie. acceptable arguments for a CGI script*) [page 4, paragraph 0054 & page 5, paragraphs 0058-0059];
- b. at a reverse proxy server residing between at least one client computer and a web server [figure 2];

- i. receiving an incoming message from the at least one client computer, wherein the incoming message, if malicious and upon receipt by the web server, automatically causes the web server to perform an action which exploits a vulnerability of the web server(*ie. step 600*) [figure 6];
- ii. comparing the received incoming message with the signature file to determine whether the incoming message is malicious(*ie. step 610*) [figure 6];
- iii. and if it is determined to be malicious, blocking the incoming message from reaching the web server(*ie. request is rejected*) [page 4, paragraph 0054].

Claim 9: Kindberg et al. discloses a system for maintaining computer security comprising:

- a. a signature file containing information about known system vulnerabilities, the information not including viral signature patterns [page 4, paragraph 0054 & page 5, paragraphs 0058-0059];
- b. a web server [figure 2];
- c. reverse proxy server residing between at least one client computer and a web server, the reverse proxy server operable to [figure 6]:

- i. receiving an incoming message from the at least one client computer, wherein the incoming message, if malicious and upon receipt by the web server, automatically causes the web server to perform an action which exploits a vulnerability of the web server [figure 6];
- ii. comparing the received incoming message with the signature file to determine whether the incoming message is malicious [figure 6];
- iii. and if it is determined to be malicious, blocking the incoming message from reaching the web server [page 4, paragraph 0054].

Claim 16: Kindberg et al. discloses a computer storage medium containing code for maintaining computer security comprising:

a. providing a signature file containing information about known system vulnerabilities, the information not including viral signature patterns [page 4, paragraph 0054 & page 5, paragraphs 0058-0059];

b. at a HTTP reverse proxy server residing between at least one client computer and a web server [figure 2]:

i. receiving an incoming message from the at least one client computer, wherein the incoming message, if malicious and upon receipt by the web server, automatically causes the web server to perform an action which exploits a vulnerability of the web server [figure 6];

ii. comparing the received incoming message with the signature file to determine whether the incoming message is malicious [figure 6];

iii. and if it is determined to be malicious, blocking the incoming message from reaching the web server [page 4, paragraph 0054].

Claim 34: Kindberg et al. discloses a method for maintaining computer security comprising:

a. providing a signature file containing information about known system vulnerabilities the information comprising a predefined length of a Universal Resource Locator ("URL") in a message header [page 4, paragraph 0054 & page 5, paragraphs 0058-0059];

b. receiving an incoming message from at least one client computer [figure 6];

c. comparing a length of a URL in a message header of the incoming message with the predefined length in the signature file to determine whether the incoming message is malicious(*ie. URL having a character string conforming to the length established*) [page 4, paragraph 0052];

d. and if the incoming message is determined to be malicious, blocking the incoming message from reaching a web server [page 4, paragraph 0054].

Claims 2-4, 10 and 17-19: Kindberg et al. discloses an invention as in claims 1, 9 and 16 above and further discloses that the comparing further comprises:

- a. parsing the incoming message [page 4, paragraph 0055];
- b. converting the incoming message into an internal format(*ie. specific CGI arguments etc.*) [page 5, paragraph 0060];
- c. comparing the converted incoming message with the signature file and determining whether the converted incoming message is malicious based on the comparison(*ie. list of acceptable arguments etc*) [page 5, paragraph 0059];
- d. reassembling the converted incoming message back into its original format prior to forwarding it to the web server if it is determined that the code is not malicious and forwarding the reassembled message to the web server(*ie. argument passed through unchanged, etc.*) [page 5, paragraph 0061].

Claims 5, 11 and 20: Kindberg et al. discloses an invention as in claims 1, 9 and 16 above and further discloses that the signature file contains information about known system vulnerabilities(*ie. acceptable arguments for a CGI script*) [page 4, paragraph 0054 & page 5, paragraphs 0058-0059].

Claim 15: Kindberg et al. discloses a system as in claim 10 above and further discloses that the signature file is linked to the HTTP message analyzer module(*ie. list of acceptable arguments*) [page 5, paragraph 0058].

Claims 24-26: Kindberg et al. disclose a method, system and computer storage medium as in claims 1, 9 and 16 above, and further discloses that the incoming message comprises an HTTP messages [abstract].

Claims 27-29: Kindberg et al. discloses the invention of claims 1, 9 and 16, and further discloses that:

- a. the information comprises a predefined length of a Universal Resource Locator ("URL") in a message header(*ie. URL having a character string conforming to the length established*) [page 4, paragraph 0052];

Art Unit: 2135

b. and comparing the received incoming message with the signature file comprises comparing a length of a URL in a message header of the incoming message with the predefined length in the signature file [figure 6].

Claims 30-32: Kindberg et al. discloses the invention of claims 1, 9 and 16, and further discloses that the viral signature patterns comprise one or more binary patterns associated with a virus(*ie. character string length is not a binary pattern of a virus*) [page 4, paragraph 0052].

Claim Rejections - 35 USC § 103

10. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

11. **Claims 6-8, 12-14 and 21-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over**

Kindberg et al. (2003/0061515) in view of Cambridge (7,080,000).

Claims 6, 12 and 21: Kindberg et al. discloses a method, system and computer storage medium as in claims 1, 9 and 16 above, but does not explicitly disclose that the signature file is made available through a web server. However, Cambridge discloses a similar method, system and computer storage medium and further discloses that the signature file(*antivirus database*) is made available through a web server(*antivirus server*) [abstract]. Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to make the signature files available through a web server. One would have been motivated to do so in order to make signature file updates easily accessible.

Claims 7, 13 and 22: Kindberg et al. discloses a method, system and computer storage medium as in claims 1, 9 and 16 above, but does not explicitly disclose continuously updating the signature file. However, Cambridge discloses a similar method, system and computer storage medium and further discloses continuously updating the signature file(*antivirus data file*) [column 2, lines 63-67]. Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to continuously update the signature file. One would have been motivated to do so in order to be able to detect the latest viruses, which are constantly being created.

Claims 8, 14 and 23: Kindberg et al. discloses a method, system and computer storage medium as in claims 1, 9 and 16 above, but does not explicitly disclose periodically downloading the signature file in order to make its copy current. However, Cambridge discloses a similar method, system and computer storage medium and further discloses periodically downloading the signature files(*receiving a new antivirus file at one of the user computers*) in order to make its copy current [abstract]. Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to periodically download the signature files. One would have been motivated to do so in order to be able to detect the latest viruses, which are constantly being created.

12. Claim 33 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kindberg et al. (2003/0061515) in view of El-Rafie (6,968,394).

Claim 33: Kindberg et al. discloses the method of claim 1, and further discloses logging user requests and in particular logging the user identity [page 4, paragraph 0056], but does not explicitly disclose that if the incoming message is determined to be malicious, identifying the first computer; and automatically blocking future messages received from the first client computer.

However, El-Rafie discloses a similar method and further discloses monitoring requests and identifying/blocking malicious users from future requests(*ie. determining rogue user terminals and blocking data flow to the offending IP address, etc.*) [column 26, lines 10-61].

Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to modify the method disclosed by Kindberg et al. with the features disclosed by El-Rafie in order to automatically provide a more selective access to resources within a network, as suggested by Kindberg et al. [page 1, paragraph 0012].

Response to Arguments

13. Applicant's arguments with respect to claims 1, 9, 16 and 34 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

14. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Staamann et al. (2003/0145094).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to EDWARD ZEE whose telephone number is (571)270-1686. The examiner can normally be reached on Monday through Thursday 9:00AM-5:00PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kim Y. Vu can be reached on (571) 272-3859. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
